

No other printer in the world utilizes the Gerber Cold Fire Cure™ system. Combined with GerberCAT™ cationic UV inks, the Solara ion series is the industries leading green solution.

No Ozone

The UV lamps used in the Solara ion series create no ozone, unlike the high-pressure mercury vapor UV lamps used in other printers.

No VOC's

The Solara ion series is emission free and releases no volatile organic compounds into the air.

Eco Materials

The low temperature Cold Fire Cure™ used in the Solara ion series allows them to print on heat sensitive materials like biodegradable & recycled sign board.

Energy Efficient

The low energy Cold Fire Cure uses less energy during printing than other high temperature UV curable systems.

Reduced Waste Material

The roll-to-roll configuration on the Solara ion^X only requires a 1' material leader before printing, compared to up to 3' on other inkjet printers.

Go Lean

Print directly onto the widest variety of substrates in the world. Reduce the time it takes to make a rigid sign (Print, Apply, Laminate & Trim) by printing directly on rigid materials.
