The New Gerber M Turbo™ Router Unveiled at Trade Shows

SOUTH WINDSOR, CT – October 13, 2009 – Gerber Scientific Products, a worldwide leader in sign-making and specialty graphics systems headquartered in South Windsor, CT, unveiled their new M Turbo high-powered cutter/router at the sign industry's recent trade shows in Chicago and New Orleans.

The M Turbo is a new and more powerful version of the reliable M 3000™ cutting system, part of Gerber's M Series of flatbed finishing tables. The M Turbo has the same proven features as the rest of the M Series machines, but offers a stronger, faster one kilowatt router. Visitors to the Gerber booth at the recent PRINT 09 Chicago show and the 2009 SGIA Expo in New Orleans were surprised by the new capabilities offered with the new M Turbo. Gerber senior strategic accounts manager, Steve Albert notes, "We are very pleased with the response the new Gerber M Turbo received at the shows. Graphic industry veterans know what a great asset the higher-powered one kilowatt router can be for their business, since it allows them to perform a wider variety of jobs and perform them faster, especially the ability to rout metal."

Another attractive feature of the M Turbo is its reasonably priced turnkey system. Albert says, "Show attendees were pleased to learn the M Turbo is priced lower than comparable systems. The attractive price of the M Turbo includes everything needed to get started. Instead of pricing the way competitors do, advertising a base price that includes only the table and then up-selling the customer for all the other elements they need, Gerber gives one price point for the entire, ready-to-use system."

The Gerber M Turbo's turnkey system includes the cutting table, modular cutting head, M Vision optical registration system for print-to cut applications, OMEGA™ software, a PC, reciprocating and tangential knife tools, the 1 kw electric router tool, a starter kit of knife blades

and router bits and even a one year comprehensive warranty. It's the perfect system for any business in the industry who wants a powerful router at a great price.

About Gerber Scientific Products

Gerber Scientific Products is a leader in the development and manufacture of computerized sign making and specialty graphics systems, software, materials and accessories. The company's start-to-finish digital design, printing and production products integrate via its unique Matched Technology System™ to provide customers with comprehensive engineered solutions for every color printing and dimensional signage need.
