

The libraries listed below are available for use with the OMEGA Library Pack option. A PDF file of these libraries can be seen at the following link on the GSP website: <http://www.gspinc.com/default.asp?contentID=56#FONTS>. Additionally, 22 Gerber Sign Library (GSL) collections and several sample libraries are already available for use with OMEGA. These are already unlocked and can be accessed from your OMEGA Font and Library CD.

### Using the Password

The GCA (Gerber ClipArt) files included with this option are accessed in the following way using the password that was provided from GSP and your distributor:

1. Start Composer
2. Insert the OMEGA Font and Library CD into the CD drive (Compatible with OMEGA 2.5 and later)
3. In Composer, Go to the File Menu>then Library. Browse to the CD drive, then to the ADA folder. Choose any piece of clipart from the folder to insert it into Composer.
4. You will be asked for a password. Type in the password in the field exactly as it appears on the password sheet.
5. You will now have access to all the clipart libraries listed below on that particular system. The same password *cannot* be used on multiple systems

### Use the Clipart Libraries from the CD or Copy them onto your Hard Drive

Once you have entered the password, you can access the Library Packs directly from the CD. For faster access and convenience, you can also copy all the library folders from the CD right onto your hard drive. If these library folders are copied under c:\gsp\library\ you will see them when using the Composer File>Library command.

### Using Corners and Borders

The Borders and Border2 libraries include 2 parts: Corners and Borders. The corners are decorative open shapes with a number associated with them. The borders are open shapes designed to be matched with the corners of the same number. As an example, you might import corner37.GCA, and also import border37.gca and connect them using your detail edit hook tool. You can then copy and paste the connected results, flip them, and connect them again.

### Vinyl Color vs. EDGE Colors

Many of these library pieces use black vinyl for cutting on a plotter. When EDGE printing, you may need to change your vinyl color to white, then assign EDGE colors.
