

April 2005 Materials Update for MacImprint™

The April 2005 Materials Update for MacImprint provides updated software settings which will improve GERBER EDGE® and EDGE2 print performance. These settings offer improvements to foil performance on EDGE READY™ materials and introduce two new foils:

- * GerberColor(TM) Traffic Grey foil (GSC-151) -- 45m P78908A
- * GerberColor Vivid Blue foil (GSC-017) -- 45m P78904A

Installing the Materials Update

This Materials Update for MacImprint contains three files:

Gsplrid.dat
Firefile.b32
Readme.rtf (this file)

1) Copy the files Gsplrid.dat and firefile.b32 to the MacImprint application support folder. Do not nest them within another folder.

Use Finder to browse for the MacImprint application support folder. Start from the hard disk icon in the Finder Sidebar. Navigate to the Library:Application Support:MacImprint Support folder (e.g. MacintoshHD:Library:Application Support:MacImprint Support.)

Tip: An easy way to locate your MacImprint Support folder is to perform a search for the file "About MacImprint Support.rtf" using Finder.

2) After installing a materials update, the MacImprint Adobe® Illustrator® plug-in MUST be run under an account with administrator privileges in order to activate the materials update. After running Illustrator once, you may return to a non-administrator account if you wish.

After performing a materials update and creating GSP swatches, the following new spot colors should be listed in the Swatches window in Adobe Illustrator:

GerberColor Traffic Grey foil (GSC-151)
GerberColor Vivid Blue foil (GSC-017)
